

This map is a compilation of the biotech industry's effort to rid the world of COVID-19.
Our visualization aims to convey not only individual innovations from specific companies but also the collective effort and shared "battles" of the entire industry.
The urgency of COVID-19 will temporarily require not only new treatments for an acute viral illness but also a greater appreciation of what society can accomplish when we unite against a common foe. We've already achieved remarkable innovations in many diseases: Hepatitis C, HIV, malaria, breast cancer, and cystic fibrosis, to name a few. What we need now is a sustained, collective effort to make medical advances available to everyone instead of overprescribing patients with unnecessary out-of-pocket costs that discourage them from receiving appropriate care. This will require fundamentally reforming America's insurance system, building on the recent progress put in place after years of trials, failures, and setbacks to cover COVID-19 testing and the uninsured were overwhelmed by the cost of hospitalization.
The Biotech Social Contract, as described in *The Great American Drug Deal*, offers that we do not have to choose between innovation and affordability. We as a society can rise to the challenge of tackling all major diseases just as we have COVID-19, making investments that will permanently upgrade our health and that of future generations.

COVID-19 THERAPEUTICS

COVID-19 DISEASE OVERVIEW

SYMPTOMS: Fever, dry cough, fatigue, and shortness of breath are the most commonly reported with COVID-19. The CDC also includes loss of taste or smell, muscle aches, headache, and sore throat as symptoms. In severe cases, while other symptoms have been reported, they seem to be less frequent.

COVID-19 SYMPTOMS:

- Loss of taste or smell
- Sore throat
- Headache
- Muscle aches
- Shortness of breath
- Fatigue
- Dry cough
- Fever
